

Before you sail

Ferries can move unexpectedly and may encounter wind, waves, or vibration. A few simple steps can help keep your motorcycle secure and protect nearby vehicles, passengers, and crew.

Follow crew direction at all times while loading, sailing, docking, and unloading.

Questions?

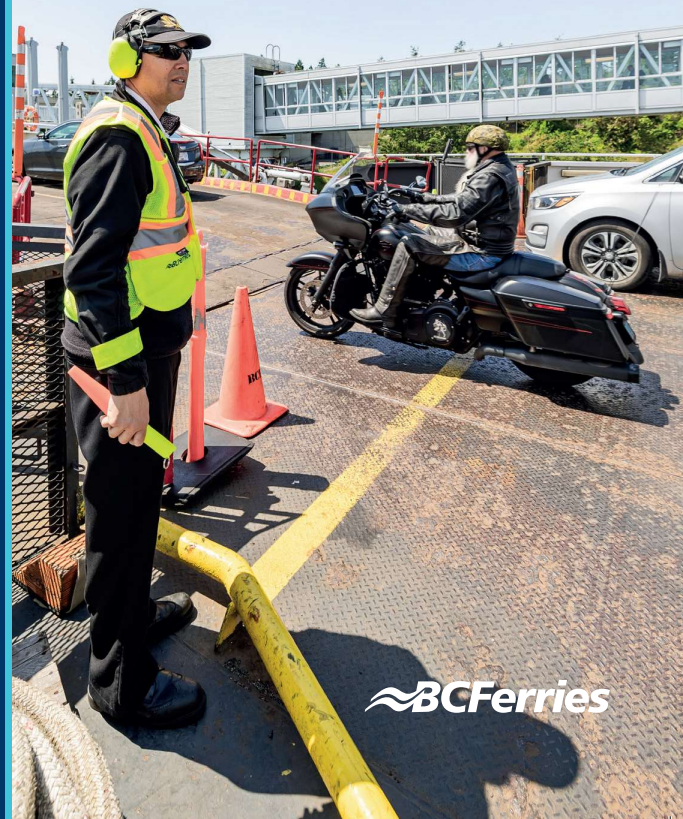

Deck crew are available to help if you have questions about parking or securing your motorcycle.

Please remember: Motorcycles are parked and secured by the rider and remain at the rider's own risk.

Northern routes

Motorcycle customers on these routes must be secured with onboard lashings and vehicle blocks.

- Use three blocks: one opposite the stand and one at both the front and back of the rear tire.
- Attach lashings to deck-securing devices or eye bolts, compressing the front shocks where appropriate.
- Keep securing devices in place until the vessel is docked.

General tips for motorcyclists on non Northern routes

Park smart

- Park at a 45° angle to the ship's centreline.
- Where available, rest your rear wheel against the yellow tire guard.
- Leave your motorcycle in low gear to help prevent rolling.

Add support

- Use the side stand.
- Use wooden vehicle blocks where extra support is needed.
- Block the side opposite the stand, and use a front-tire block if required.
- Return to your motorcycle promptly once arrival announcements are made.
